# IntelliSearch for EPiServer

## Optimized search solution for EPiServer

Content Management Systems meet an increasing demand for search technology, as this significantly influences the overall user-experience. At the same time, organizations want their intranet to be an information-hub, enabling search within the entire enterprise from one location.

**IntelliSearch for EPiServer is the answer to both demands. The solution is advanced and feature-rich, easy to implement and at a reasonable price.**

IntelliSearch, the leading independent Nordic provider of search technology, has developed this state-of-the-art solution tailored for EPiServer. With IntelliSearch's technology, which is praised by analysts and positioned on Gartner Magic Quadrant, customers can be confident that they have the best solution available for an optimized user-experience focusing on finding information, knowledge sharing, co-operation and information management.

*“ All leading research companies have methodologies for evaluating websites. Evaluations are based on a number of criteria. The Search Page and features related to search technology are increasingly important for the overall user experience ”*
